SKILLS

Engineering

- **Languages** - Javascript (node.js), Golang
- **Data Engineering** - SQL (PostgreSQL, SQLite), NoSQL (MongoDB, Redis)
- **Frontend Web Development** - Javascript, React.js, HTML, CSS, Astro.js, Vue.js
- **Infrastructure** - Docker, AWS, Kubernetes, Proxmox, Dokku
- **Tools** - Git, terminal, Neovim, Docker

General

- **Languages** - Native Spanish, English C1, Basic French
- **Methodologies** - Kanban, Scrum

EXPERIENCE

Confiao

Caracas, Venezuela

Tech Lead - technologies: *DevOps, Node.js, PostgreSQL, MongoDB, System Design, Architecture* 2025.05-present

- Developed and implemented the organization's entire on-prem infrastructure, creating development and testing environments, internal tools, and configuring networks and required hardware.
- Redesigned the entire codebase architecture into microservices and created an implementation plan to execute with the development team, improving application performance.
- Designed and implemented the production deployment pipeline for mobile and web applications, as well as databases and backend services.
- Designed and implemented a monitoring and observability system for all applications in both development and production environments.

PagoChinchin

Caracas, Venezuela

Backend Developer - technologies: *Node.js, PostgreSQL, MongoDB, RESTful, Microservices* 2021.05-2025.02

- Contributed to the design and implementation of a microservice responsible for issuing prepaid dollar cards through a strategic partnership with Mastercard (via a national bank).
- Simplified the onboarding process by enabling bank account creation for individuals, reducing the time required from days to minutes by integrating banking APIs and adding Pago Móvil (Venezuela's instant payment system, similar to Zelle) for affiliated banks.
- Improved operational efficiency by reducing transaction fees through refactoring the microservice responsible for basic payments (phone, internet, electricity) and switching to a new provider, improving profitability and user experience.
- Contributed to the expansion of the platform's payment gateway, integrated into large companies (Delivery Hero, MercadoLibre), by adding new payment methods and maintaining existing ones.

Automation Group

IoT Specialist - technologies: *ESP32, Node-RED, InfluxDB*

2019.10-2020.02

- Increased awareness of household water consumption by developing a monitoring and management system for residential water tanks.

EDUCATION

U.N.E.F.A

Electronic Engineering

2012.10-2017.11

PROJECTS

- Developed my portfolio using Astro.js and Vercel, and published it on a public domain *simonctech.com*
- Developed an application to track gym workouts *workout-logger.com*
