Dear Hiring Manager,

I am writing to express my strong interest in the Senior Web Engineer position at Cashea. With my extensive experience in React.js development, frontend architecture, and fintech applications, I am confident that I would be a valuable addition to your team as you continue to revolutionize financial inclusion in Venezuela.

My background aligns perfectly with your requirements. With over 5 years of production React experience, I have built and maintained scalable web applications, component libraries, and design systems. At Confiao, I led frontend architecture decisions, established React component libraries, and mentored developers on React best practices and TypeScript adoption. I understand the importance of Core Web Vitals optimization and have a proven track record of improving performance metrics.

I am particularly excited about Cashea's mission to give Venezuelans back the opportunity to access credit through your BNPL model. My experience at PagoChinchin working with payment systems, Mastercard integrations, and Pago Móvil has given me deep understanding of the fintech landscape in Venezuela. I have experience building merchant dashboards, web flows, and internal tooling that handles real-time transactions - exactly the type of work you described for this role.

Your emphasis on clean React architectures, testing strategies, and documentation resonates with my approach to software development. I am passionate about creating maintainable, scalable solutions and have established testing strategies using Jest and React Testing Library. I believe in writing code that is not just functional, but also reliable and maintainable in production.

I would welcome the opportunity to discuss how my skills and experience can contribute to Cashea's mission of financial inclusion. I am available for an interview at your convenience and look forward to learning more about this exciting opportunity to build products that make a real difference in people's lives.

Sincerely,

Simon Clemente
